In response to increasing demand from Practitioners, Biotics Research has developed the Weekly Practice Builder program to bring important, leading-edge information and literature to you, thereby helping facilitate the growth of your practice. Biotics Research products are available exclusively through Healthcare Providers.

Our featured supplement of the week is **Gammanol Forte™ (with FRAC™)**

Why do your patients need Gammanol Forte™ (with FRAC®)™? Gammanol Forte™ is a source of Gamma Oryzanol, a naturally occurring mixture of plant sterols and free transferulic acid esters derived from rice bran. Research indicates that Gamma Oryzanol has a plethora of functional effects. In addition to its best known actions on promoting increases in lean muscle mass and enhancing endorphin release, the sterol component of Gamma Oryzanol has noted effects on modified sterols such as testosterone, estrogen, progesterone, DHEA, etc. It has been known to support normal, healthy cholesterol levels, support hormonal fluctuations associated with menopause, increase human growth hormone activity (as measured using insulin growth factor I (IGF-I)), and is a potent antioxidant. It has also been shown to have a normalizing effect on gastric functioning, particularly on gastric and duodenal mucosa.

Why choose Gammanol Forte™ from Biotics Research Corporation? Not all Gamma Oryzanol is created equally. While Gamma Oryzanol may be sourced from corn or barley, Biotics Research chooses to use Gamma Oryzanol from rice bran, as it results in a superior product free from common allergens. Biotics Research Corporation processes Gamma Oryzanol utilizing a highly specialized fractionation process (**FRAC®**) that vastly improves the bioavailability of the ferulic acid component. In addition to this marked improvement in bioavailability is the synergistic effect with **Gammanol Forte's™** combination of Gamma Oryzanol and **FRAC®**, with its' proprietary tableting base. Laboratory findings reveal a combined antioxidant effect that is far superior to the antioxidant status of either constituent on its own. Collectively, **Gammanol Forte™** may just be one of the most versatile supplements that you've never heard about. As always, Biotics Research Corporation brings you "The Best of Science and Nature".

Studies You Should Know About

Low Vitamin D Status Associated with Increased Risk of Myocardial Infarction. In yet another study extolling the virtues of vitamin D, it has been noted that not only were low serum levels of 25-hydroxyvitamin D associated with higher risk of myocardial infarction but also with controlling factors known to be associated with coronary artery disease. *Giovannucci E, Liu Y, Hollis B, Rimm E. 25-Hydroxyvitamin D and Risk of Myocardial Infarction in Men. Arch Intern Med. 2008;168(11):1174-1180.*
